

Smart Mobility BYOD (Bring Your Own Device)

A mobility solution is essential for organisations that need to encourage team working and greater productivity from geographically diverse and mobile teams.

Including both a Hosted PBX seat and a GSM mobile SIM from Vodafone or O2, Avalle Mobile provides a fully meshed fixed and mobile experience. Featuring One Number, One Voicemail, presence, chat and live call push/pull, Avalle mobile extends the full capabilities of the hosted phone system to mobile workers.

The underlying GSM number is totally masked for the making and receiving of calls with the added advantage that all calls from the mobile are recorded and logged under the User profile in the Uboss portal (if you have call recording as an added service). For customers, this provides a seamless mobility solution with unified directories, collaboration with office or mobile colleagues and a unified user experience.
