

Number Porting FAQ

WHAT TYPES OF NUMBER PORTS ARE THERE?

We can port "Single Line" which is typically an analogue line or "Multi Line" which is a DDI range. We can also port NGN numbers and International numbers.

HOW LONG DOES NUMBER PORTING TAKE?

This depends on the port type, the range holder and the losing provider. In 50% of cases the range holder and losing provider is BT. In that case a Single Line port should take 5 working days and a Multi Line, with up to 100 numbers, should take 11 working days. Multi Line ports with a lot of numbers or different losing providers can lengthen the process. Also should any information, such as the post code, be incorrect this will lengthen the time port considerably.

For porting NGN numbers there is no SLA and can take several weeks.

HOW DO NUMBERS WORK IN THE UBOSS SYSTEM?

Ported and Avalle provided numbers can be assigned to a customer Group and can then be cascaded down to a Site. Numbers can then be assigned to group services such as hunt groups and users. For NGN numbers, these are "real" numbers the same as any geo number. That means there is no diversion from the NGN to an underlying DDI. Ported ranges must not and cannot be split across multiple customers.

WHAT INFORMATION DO I NEED FROM THE CUSTOMER TO INITIATE A NUMBER PORT?

We need...

- Single line or Multiline
- The main billing number (MBN)
- The post code registered against the MBN
- If multiline (which includes Feature lines) then associated or other numbers
- The front page of the losing provider bill and the customer signed letter of Authority

CAN I PORT SPECIFIC DDI NUMBERS FROM WITHIN A RANGE?

No, the whole DDI range must be ported together, individual numbers cannot be split out

WHEN WILL THE NUMBERS ACTUALLY PORT AND IS THERE ANY DOWNTIME?

The number port Process will usually commence at 10am on the specified day. There should be no downtime but if the port involves a complex multiline then there may be a short outage of up to 30 mins. At this point all the IP phones need to have been deployed and when the port has completed calls will start coming into the Hosted system

CAN THE CUSTOMERS CANCEL A SCHEDULED PORT?

A port can be cancelled up to 24hrs prior to the day before the port is scheduled, it will then go into lockdown and cannot be cancelled or amended

WHAT IS THE NUMBER PORTING PROCESS?

The porting service must be assigned in Uboss at the business level and the LoA docs can be uploaded

IF THE CUSTOMER DOES NOT HAVE TIME FOR THE PORT WHAT CAN WE DO?

One option is to build the customer in Uboss and assign Alternative Number service and temporary main number. The customer can then arrange a divert to the temp number while the port is progressing. Please note the customer will incur diversion charges from the losing provider.

HOW CAN I CHECK PROGRESS OF THE NUMBER PORT?

Within Uboss there is a Number Porting dashboard which will show the status of all submitted number ports to streamline the process
